AirSafe.com Observes its 10th Anniversary

Seattle, WA – July 11 2006 – Ten years ago this month, Dr. Todd Curtis launched AirSafe.com with a simple mission – to provide the aviation safety community, the news media, and the general public with factual and timely information on major events that aviation safety and aviation security. The site has been in continuous operation since July 1996, and has become one of the most widely recognized airline safety and security resources on the Internet, providing insight and analysis of events such as TWA Flight 800 and the attacks of 9/11.

Along the way, the site and its creator have expanded the information and services available to the public. In 2000, Dr. Curtis authored the book "Understanding Aviation Safety Data," which provided a systematic method for asking and answering aviation safety related questions using the publicly available information. Late last year, the site added a podcast series "The Conversation at AirSafe.com," a joint effort with the nonprofit AirSafe.com Foundation, allowing visitors to easily download a variety of discussions and reports related to airline safety and security.

About Dr. Curtis

A former USAF flight test engineer and Boeing airline safety engineer, Dr. Curtis has earned engineering degrees from Princeton and MIT, and a doctorate in Aviation Risk Assessment from the Union Institute. He is also a licensed private pilot and a member of the International Society of Air Safety Investigators.

Dr. Curtis and AirSafe.com have appeared frequently in major news media outlets such as CNN, CBS, NBC, the New York Times, Time Magazine, and the Wall Street Journal.
